# SALE OF GOVERNMENT PUBLICATIONS.

The undermentioned Firms have been appointed sole Agents for the sale of Government Publications, embracing Parliamentary Reports and Papers, Acts of Parliament, Record Office Publications, &c., &c., and all such works can be purchased from them either directly or through retail booksellers, who are entitled to a discount of 25 per cent. from the selling prices:—

## IN ENGLAND:—

For all publications *excepting* Ordnance and Geological Maps, the Hydrographical Works of the Admiralty, and Patent Office Publications:—Messrs. EYRE AND SPOTTISWOODE, East Harding Street, E.C.

For Hydrographical Works of the Admiralty:—Mr. J. D. POTTER, 145, Minster, E.C. Patent Office Publications are sold at the Patent Office.

For all Publications *excepting* the Hydrographical Works of the Admiralty, Patent Office Publications and Ordnance and Geological Maps:—

IN SCOTLAND:—Messrs. OLIVER AND BOYD, Edinburgh.

IN IRELAND:—Mr. E. PONSONBY, 116, Grafton Street, Dublin.

The Publications of the ORDNANCE SURVEY and of the GEOLOGICAL SURVEY can be purchased from Agents in most of the chief towns in the United Kingdom, through any Bookseller, or from the Director General of the Ordnance Survey, Southampton, or in the case of Ireland, from the Officer in Charge, Ordnance Survey, Dublin. In addition, Ordnance Survey Publications can be obtained through Head Post Offices in towns where there are no accredited Agents.

The following is a list of some of the more important Parliamentary and Official Publications recently issued:—

## Parliamentary:

### Statutes—

*Public General, Session 1900, Sess. 2, and 1901.* With Index, Tables, &c. Cloth. Price 3s.

*Second Revised Edition. A.D. 1235–1713 to A.D. 1872–1883.* XVI. Vols. Price 7s. 6d.

*Revised Editions.* Tables showing subsequent Repeals, effected by Acts of Session 63 & 64 Viet. 1900. Price 5d.

*Statutes in Force. Index to.* 17th Edition. To end of 1 Edward VII. (1901). 2 Vols. Price 10s. 6d.

*The Statutory Rules and Orders revised.* Statutory Rules and Orders, other than those of a Local, Personal, or Temporary Character, issued prior to 1890, and now in force. Vols. I. to VIII. Price 10s. each.

*Statutory Rules and Orders* other than those of a Local, Personal, or Temporary Character. With a list of the more important Statutory Orders of a Local Character, arranged in classes; and an Index. Roy. 8vo. Boards. Issued in the years 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, and 1901. Price 10s. each.

*Statutory Rules and Orders in force on 31st December 1899.* Index to. Price 10s.

*Statutory Rules and Orders, 1902.* Registered under the Rules Publication Act, 1893. In course of issue.

*Acts of Parliament, Session 1901, Public, 1d. per 8 pp. Local, and Private, Price, 3d. per 4 pp.*

EDUCATIONAL SUBJECTS. Special Reports. Vols. II. to IX. United Kingdom and Colonial and other Possessions; and the principal Countries of the World. Price (complete) 1l. 7s. 5d. (Vol. I. is out of print.)

[Cd. 833.] *FOOD PRESERVATIVES.* Report of Committee on. With Evidence, Appendix, AND INDEX. Price 4s. 3d.

[Cd. 922.] *STATISTICAL TABLES* relating to the Colonies and other Possessions of the United Kingdom, 1899. Price 5s. 7d.

## AGRICULTURAL RETURNS, 1901.

---

### REPORT TO THE SECRETARY OF THE BOARD OF AGRICULTURE.

SIR,

I HAVE now to submit the complete Agricultural Returns for 1901. The volume includes not only the information collected, and separately issued as available, respecting Acreage and Live Stock, Production, and Prices in Great Britain during the past year, but also additional details, furnished as usual to the Board by the Lieutenant-Governors of the Isle of Man, Jersey, and Guernsey, and by the Department of Agriculture and Technical Instruction for Ireland. It is thus possible to present a general view of the agricultural position, not only of Great Britain, but also of the United Kingdom in 1901, while supplementary data embodying the latest official Colonial and Foreign Agricultural Statistics, and the recorded Imports and Exports of Agricultural Produce have again been added, with the co-operation of the Board of Trade, the Commissioners of His Majesty's Customs, and the India Office, as well as the authorities of the British Colonies concerned.

Number of  
Returns.

The statistics of Acreage and Live Stock in Great Britain were obtained in 1901, as heretofore, from the individual occupiers of land by Officers of the Inland Revenue, and have been compiled from 514,635 separate schedules, representing the distribution of the crops and number of the animals on the holdings of the occupiers of more than one acre of land on the 4th of June. The returns collected in England numbered 374,235, in Wales, 60,711, and in Scotland, 79,689, while supplementary returns, as regards live stock only, were received from 10,985 owners of stock, who either occupied no land at all, or whose holdings did not exceed one acre. Resort to estimates was necessary in less than 3 per cent. of the total number of individual returns, representing a similar proportion of the cultivated area, and it is satisfactory to note that from several counties the collectors report an increasing readiness to make returns on the part of the few occupiers who have previously been conspicuous for their unwillingness to facilitate the collection of the information which it is clearly advantageous to the agricultural community to obtain.

Advance  
Statements.

The abstracts containing the information, collected during the summer and tabulated locally, reached the Board at various dates during the month of August. An advance statement was placed before the public on the 27th of that month, and shewed, for the first time at so early a date, the total area under each Crop and the number and classes of Live Stock in Great Britain. The complete county details of these figures were issued on the 3rd of October. The estimates of the Produce of Crops reached the Board during the latter part of November, and a summary statement, giving the yield of the three chief cereals, was published on the 3rd of December, and the figures for all the enumerated crops were completed in March by an issue of the series of County Tables, in advance of their appearance in this volume.

## Total Area.

The total extent of Land and Water, exclusive of foreshore and tidal water, in Great Britain, according to the latest revision of the figures made by the Director General of the Ordnance Survey, stands at 56,786,000 acres. Of this surface nearly 13,000,000 acres represent the estimated area of mountain

and heath land, which is, in a greater or less degree, utilised for the maintenance of sheep and cattle. The special returns collected in 1895 shewed that a further area of 2,726,000 acres in Great Britain was occupied by Woods and Plantations, while the total acreage of crops and grass returned at the present time as cultivated amounts to 32,417,000 acres. It would thus appear that about 85 per cent. of the measured surface of the country is accounted for as employed for the purposes of Agriculture and Forestry.

The proportion of land and water falling outside the scope of these Returns necessarily varies considerably in different parts of the country. The surface which would not appear to be available for utilisation, either for farming or grazing, or for woodland, amounts in England to 12 per cent., and in Scotland to no less than 22 per cent. It may be added that in the Channel Islands, where it is generally understood that the land is utilised to its utmost extent, the proportion of the total area which is not brought into account in these returns is also large, being in Guernsey nearly 22 per cent., and in Jersey 29 per cent. It has to be borne in mind, however, that the area unaccounted for includes not only so much of the soil as is used for non-agricultural purposes, but all the minor holdings which do not exceed one acre, although the aggregate extent of land thus represented may not be very considerable.

In recent Reports allusion has been made to the close connection of the never-ceasing encroachment of the urban districts with the persistent process of attrition to which the area commonly described as "cultivated"—comprising the whole extent of surface under crops and permanent grass for which details are collected—appears to be subjected. But some portion also of the land which yearly drops out of the "cultivated" category may re-appear among the rough pastures shewn in the Returns as "Mountain and Heath Land used for grazing." The approximate extent of land so described has only been shewn since 1892, and the increase which has been annually recorded under this heading may include certain areas thrown out of ordinary

**Total Area.** cultivation, although the greater exhaustiveness of the information secured is reported by the collecting officers to be the main cause of the apparent extension of the rough grazing area.

**Arable and Pasture.** The decline in arable cultivation and the consequent extension of the area under permanent pasture, which forms the most distinctive movement during the later years of the nineteenth century has been frequently alluded to. It may however be of interest to supplement the general view given last year by exhibiting the varying degree of intensity exhibited by this movement in different parts of Great Britain. The quinquennial periods 1867-71 and 1897-1901 are contrasted in the following table:—

	Arable Area in 1867-71.	Per Cent. of Total Cultivated Area.	Arable Area in 1897-1901.	Per Cent. of Total Cultivated Area.
	Acres.	%	Acres.	%
England ... ..	13,511,000	58	11,415,000	46
Wales ... ..	1,074,000	43	897,000	32
Scotland .. ...	3,388,000	76	3,498,000	71
Great Britain ...	17,973,000	59	15,810,000	49

It will be observed that while the land under the plough has fallen in England from 58 to 46 per cent. of the cultivated area, in Scotland the decline has only been from 76 to 71 per cent. The variations in particular districts have of course been still greater. Thus in Surrey the proportion of arable land has fallen from 65 to 45 per cent., in Sussex from 61 to 42 per cent., and in Monmouth from 40 to 20 per cent., of the area under cultivation. In some of the principal arable counties, however, the withdrawal of land from the plough has been relatively much less, although the areas affected are considerably larger than where the proportionate change has been more striking. Thus in Lincolnshire out of every 100 acres of farm land, 71 were in tillage in 1867-71, and of these 67 still remained under the plough in 1897-1901. In Suffolk and Cambridgeshire also more than three-fourths of the agricultural land is still arable, and the decline during the thirty years has amounted to only five and

eight acres respectively out of every hundred. In Scotland also, <sup>Arable and Pasture.</sup> although in a few counties, such as Fife in the East and Inverness in the North, there has been an appreciable reduction of ploughed land, there are many others which shew comparatively little change.

#### CHANGES IN CROP AREAS.

While the area returned as under crops or grass in Great Britain in 1901 was once more reduced by 20,000 acres, it is to be noted that nearly a third of the whole loss is reported from a single county—Hampshire,—where a decrease of 6,000 acres was attributed by the collectors to the taking of land for military purposes and for building, together with some transfer of land returned as permanent pasture in the previous year to the category of Mountain and Heath Land on the ground that "it afforded no pasturage in consequence of the drought in Spring."

The diminution by 144,000 acres, or nearly 8 per cent., of the <sup>Wheat.</sup> area under wheat in Great Britain, followed upon similar losses of 156,000 acres and 101,000 acres respectively in the two years immediately preceding. This reduced the acreage practically to the level of 1896, a year in which, with the single exception of 1895, the smallest breadth of wheat land was recorded in Great Britain. Reductions of over 8,000 acres in each case were reported from Norfolk and the North Riding of Yorkshire, while, in the latter case, the comparatively small acreage devoted to this crop was reduced by no less than one-third, but some tendency to restrict wheat-growing was apparent in almost every county.

The reduction by 18,000 acres of the area under barley represents <sup>Barley.</sup> no material change in England, where the loss of less than 10,000 out of 1,645,000 acres is inappreciable, but on the smaller area devoted to this crop in Wales and Scotland the decline was relatively more serious. Nearly half of the Scottish decrease occurred in Aberdeenshire, where it was attributed to a diminished demand for distilling purposes.

In one or two English counties, such as Norfolk and Suffolk, <sup>Oats.</sup> and in many of the Scotch counties, a portion of the area withdrawn from wheat appears to have been devoted to oats in 1901. North of the Tweed, indeed, the returns indicate a net

**Oats.** addition of 7,000 acres to the acreage under that crop, but the whole of the Welsh counties shewed a decline which, in the aggregate, balanced the increase in Scotland, and, as a similar tendency prevailed over the greater part of England, the year shewed the total acreage of oats in Great Britain to be less by 29,000 acres.

**Potatoes.** An increase of nearly 16,000 acres or 2·8 per cent. in the area devoted to potatoes has to be set against the general tendency to reduce the extent of land under tillage crops, and this addition brought the acreage of potatoes up to 577,000 acres, a larger total than had been recorded since 1889. The majority of English counties participated in this extension of area, the largest additions occurring in Lincolnshire, Cambridgeshire, the West Riding of Yorkshire, and Norfolk. In Wales and Scotland the tendency was in the opposite direction, all but one of the counties in the Principality, and the majority of counties North of the Border exhibiting a diminished surface under potatoes.

**Roots.** The persistent reduction of the acreage returned as under Turnips or Swedes, which has continued year by year since 1893, was again evident in 1901, the decrease amounting to 24,000 acres or 1·4 per cent. Among the few counties which formed an exception to the general rule of reduction, Norfolk was prominent with a small increase of 1,388 acres or rather more than one per cent. As this year's returns shewed a diminution of the Mangold crop in Great Britain by nearly 16,000 acres, or 3·8 per cent., this feature confirms the observation made last year that the reduction of the area devoted to turnips cannot be generally accounted for by the supposition that mangolds have been substituted for them.

**Green Crops.** A marked diminution, to the extent of nearly 8 per cent, is shown in Cabbage, Kohl Rabi and Rape. As for several years past the cultivation of these crops has tended to increase, the reason for the check to their extension in 1901 is not very apparent. In one county the decline in the number of sheep is suggested by the collector as an explanation of the diminished acreage of Rape, and in another county Kohl Rabi is stated to be losing favour "owing to the cost of the seed and labour required, whilst on the other hand Lucerne is more

popular and profitable." This last mentioned crop indeed <sup>Green Crops.</sup> continues to grow very rapidly in favour, the area this year having extended by no less than 18 per cent. beyond that of 1900, and the total surface under Lucerne now reaches a total of 44,000 acres, or double that which was grown only seven years ago.

Clover, sainfoin and rotation grasses showed an increase of <sup>Clover, &c.</sup> 97,000 acres, the area so returned being thus raised to 4,856,000 acres, a total only twice previously exceeded—in 1889 and 1898. The reduction of the acreage under roots and the increasing demand for hay, with the smaller risk of complete failure in the case of "seeds" than of permanent grass, are no doubt influential in extending the clover area, although on the other hand there is a constant withdrawal of land from that category, as "seeds" which have been left down became in due course classified as permanent grass. One collector observes that the large increase of clover and rotation grasses shewn in his collection is "chiefly with a view to the production of permanent pasture."

The addition to the statistics collected for Great Britain of the <sup>Summary of the United Kingdom.</sup> figures for Ireland supplied by the Irish Agricultural Department, and also of those furnished for the Channel Islands and the Isle of Man, gives the following total areas for the crops of the United Kingdom in each of the last three years:—

UNITED KINGDOM.	1899.	1900.	1901.
	<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>
Area under all Crops and Grass . . . . .	47,796,000	47,795,000	47,761,000
Permanent Pasture . . . . .	28,092,000	28,267,000	28,374,000
Arable Land . . . . .	19,704,000	19,528,000	19,387,000
Corn Crops . . . . .	8,804,000	8,708,000	8,477,000
Green Crops . . . . .	4,274,000	4,301,000	4,231,000
Clover and Rotation Grasses . . . . .	6,115,000	6,025,000	6,141,000
Flax . . . . .	35,000	48,000	56,000

Small Fruit . . . . .	77,000	79,000	81,000
Bare Fallow . . . . .	347,000	316,000	350,000

## PRODUCE OF THE CROPS.

The results of the corn harvest of 1901 were generally unsatisfactory, although the wheat crop gave a better return than was at first anticipated, and proved, eventually, above the average. A deficiency of turnips was only partially redeemed by a good yield of mangolds, while the hay crop, both from clover and meadows, was unusually short. Almost the only set off to these unfavourable features of the past year was a heavy crop of potatoes, and, in the limited area affected, a large yield of hops.

Weather of  
1901.

The potent influence of the meteorological conditions of the season upon the yield of the crops, makes it of interest to summarise—as is done in Tables XL. and XLI., which are given for the first time in this report—the records which were published periodically by the Meteorological Office during the year 1901. These indicate a deficiency of rainfall, varying from 1 inch in the north-east to 6·7 inches in the south-west of England; while, during the year as a whole, the amount of bright sunshine appears to have been in excess of the mean in all parts of Great Britain.

The meteorological records of 1901, as arranged in Table XLI. shew, month by month, the character of the weather as compared with the average of the previous five years. These years, however, it must be remembered, were generally distinguished by a more or less considerable deficiency of rainfall. A January of very changeable weather was followed by a February for the most part cold and cloudy, with deficient rainfall in most places. Both in March and April, the moisture was in excess of the normal, and the conditions up to the middle of April were generally unfavourable for the sowing of barley and oats. For the remainder of the month, and during the greater part of May, warm and bright weather was enjoyed, especially in the eastern, southern, and central districts of England, only three-quarters of an inch of rain falling in May in England, and but little more in Scotland.

The first and last weeks of June were fine, but the intermediate period was cool and unsettled, with frequent rains. At the beginning and also towards the end of the following month,

thunderstorms and heavy rains occurred, but otherwise the weather of July was warm and dry. The recorded amount of bright sunshine was large in August, and the corn crops were generally harvested under favourable conditions, although the rainfall exceeded the normal in Scotland.

The detailed reports furnished by the crop estimators indicate that the corn harvest commenced early and was finished in an unusually short period. In many districts the whole of the wheat, barley and oats would seem to have been harvested in little over a month. The cutting of corn was general in England during the last week of July—the 24th of that month being the approximate date of starting in the earlier districts—and by the first week of September it had practically been carried. In Scotland, the approximate limits were from the middle of August to the end of September.

Fine harvest weather was not, however, the only reason of the expeditions ingathering of the crops, a much less satisfactory cause contributing to this result being the shortness of straw. With hardly an exception, the reports from all districts put the yield of straw below, and in most cases much below, the average. This, especially in a year when both hay and roots were deficient, was a serious addition to the difficulties of the season.

Reports furnished by the estimators as to the prevalence of attacks of insects or of disease affecting the growth of the different crops, attribute both to wheat and barley a general freedom from attack, although "Smut" and wireworm are mentioned as occurring to some extent, and in a smaller degree injury from bunt and rust is occasionally referred to. In the case of oats Scotland appears to have been very free from disease or insect pests, but "frit-fly" and "tulip-root" were mentioned in one district in England, and wire-worm in many places. Turnips suffered considerably from attacks of the "fly." Mildew and finger-and-toe also affected the crops in several counties, while the diamond-back moth is mentioned as causing damage in Durham, Lincoln, Northumberland, Notts, and Haddington. Potatoes seem to have been free from disease as a rule, although in Lincolnshire it was noted in some places, especially where the land was wet, as causing considerable

Insect pests  
and disease.

loss. Potato disease seems to have appeared also in Berkshire, Cambridgeshire, Cornwall, Hants, Herts, Glamorgan, and some other counties, but without inflicting any widespread injury. In Scotland the crop seems to have almost entirely escaped.

Comparative  
yields.

The following table shows the relation which the yield of the principal crops in Great Britain bore in each of the last eleven years to the average of the decade 1891-1900.

Year.	Wheat.	Barley.	Oats.	Potatoes.	Turnips and Swedes.	Hay (Clover).	Hay (Perennial Grass).
	Average 1891-00, 29'93 Bushels per Acre = 100.	Average 1891-00, 34'13 Bushels per Acre = 100.	Average 1891-00, 38'47 Bushels per Acre = 100.	Average 1891-00, 5'85 Tons per Acre = 100.	Average 1891-00, 12'80 Tons per Acre = 100.	Average 1891-00, 27'96 Cwt. per Acre = 100.	Average 1891-00, 22'29 Cwt. per acre = 100.
1891	104	103	101	98	103	104	106
1892	88	104	101	99	110	93	86
1893	87	87	93	113	103	68	57
1894	103	104	108	95	105	118	129
1895	88	96	98	114	100	98	86
1896	113	102	96	108	96	88	79
1897	97	99	100	88	109	105	113
1898	116	108	106	107	93	122	132
1899	109	103	101	96	72	100	103
1900	95	95	99	83	110	105	110
1901	103	94	96	109	95	92	75

Wheat.

The quality and condition of the wheat crop were generally reported to be very good, but notwithstanding a yield of 30·84 bushels per acre—a figure which was  $2\frac{1}{2}$  bushels above that of 1900, and nearly a bushel over the average of the ten years 1891-1900—the reduction of the acreage under this crop in Great Britain to 1,701,000 acres brought down the total estimate of wheat harvested in 1901 to 6,557,000 quarters. In only two previous years since the returns of produce were first collected, viz., in 1893 and 1895, has so small a production been recorded. It may be added that the quantitative results of the wheat harvest of 1901 would have been considerably improved had not the counties of Lincoln and Norfolk, which together comprise more than one-sixth of the wheat area of the country, shown an estimated yield in one case nearly a bushel and the other more than half a bushel per acre below their usual average. These results would have told still more heavily on the British total but for an excess of nearly three bushels in Essex, the third

largest wheat growing county, while especially good estimates Wheat. were reported from Cornwall with six bushels, Wiltshire with nearly five bushels and Bedford with over four bushels per acre above the average.

The estimated crop of barley harvested in Great Britain reached Barley. only 7,638,000 quarters, or less than in any year except 1893, in which year alone has a lower yield than the 30.98 bushels per acre recorded in 1901 been returned. In the English counties the deficiency in yield was greatest in Bedford, Nottingham, Bucks, and the West Riding of Yorkshire, where it fell below the average by more than five bushels per acre. Norfolk had an almost equally unsatisfactory crop, and Lincolnshire fell below the average by  $3\frac{1}{2}$  bushels. The South-Western group of counties of England returned, however, better barley crops than in 1900, while the Scotch barley yield was 3 bushels per acre better than that of the preceding season, and half a bushel over the decennial average—an experience which contrasts sharply with the results in England, where the yield is estimated to have been on the whole deficient by very nearly three bushels per acre. The condition of the barley crop generally was reported as good, but the quality appears, as a rule, to have been indifferent, and good malting samples were infrequent.

In the case of oats, the deficiency in the estimated average Oats. yield amounted to about  $1\frac{1}{2}$  bushels per acre, which on a somewhat reduced acreage brought the total production for Great Britain down to 13,763,000 quarters, a lower figure than has been recorded since 1888.

Almost the only exception to the general rule of defective yield was in Devon, which has the largest acreage of oats of any English county, and is only exceeded in that respect by one Scotch county, Aberdeen. Northumberland and Westmorland were also distinguished by over-average crops, while in Scotland the general result was an excess of more than a bushel per acre. In Fife the estimated yield was nearly nine bushels above the average. The oat crop was reported to be excellent, both in quality and condition, over the greater part of Scotland, but in England, while the condition was as a rule fairly satisfactory, the quality was commonly described as indifferent.

Total Corn  
Crops.

The following table summarises the results of the corn harvest in each of the divisions of Great Britain :—

AGRICUL- TURAL DIVISIONS.	WHEAT.		BARLEY.		OATS.

Potatoes.

Potatoes were the best crop of the year, the total production for Great Britain being estimated at 3,671,000 tons from 577,000 acres, or an average yield of  $6\frac{1}{2}$  tons per acre. This was about half a ton above the average, and on the increased acreage brought the production up to a higher figure than has been recorded in any year since 1884. In England the excess was only one-third of a ton per acre, but in Scotland the estimated yield exceeded the average by one ton per acre. In Lincolnshire, where one-sixth of the total English acreage under potatoes is found, the yield of the crop was typical of the English counties generally, being about one-third of a ton over-average, but in Cambridgeshire, on the other hand, a deficiency of three-quarters of a ton per acre was reported. With only five exceptions all the Scotch counties returned a yield exceeding the average, while in Wales the estimate exactly agreed with the decennial average. The quality and

condition of the tubers were reported as good, particularly in Potatoes. Scotland, but there were some complaints of smallness in the earlier varieties.

Turnips and swedes were estimated at more than half a ton **Roots.** per acre below the average in Great Britain generally, but the deficiency was confined to England, where it amounted to 1·2 tons per acre, the crop both in Scotland and Wales being satisfactory. In most of the English counties the yield was small, coming short of the average in Derby, Bucks, Herts, Kent, Lancashire and Notts by more than four tons per acre. In Lincoln and Norfolk, which comprise about one-fifth of the whole turnip acreage in England, the deficiency exceeded 2·1 tons per acre in the first case and one ton in the latter. In Scotland the results were diverse, the great turnip-growing county of Aberdeen returning a crop nearly one ton below the average, while the majority of Scotch counties exceeded the average, in some instances by as much as four tons per acre. Mangolds were generally a good crop in Great Britain, in 1901, being estimated at two tons per acre above the average. But in this case the county having the largest acreage—Norfolk—was unfortunate in the yield being there slightly under average, a result which only three other English counties shared.

The hay cut from clover and artificial grasses in Great Britain **Hay.** was estimated to have barely exceeded 3,000,000 tons, being an average production per acre of  $25\frac{1}{2}$  cwts., or  $3\frac{1}{2}$  cwts. below the yield of 1900, and 2 cwts. below the decennial average. The quantity of hay cut from permanent grass was, however, still more deficient in the past season, the estimates shewing a total of only 3,616,000 tons compared with 5,340,000 tons in the preceding year, and representing a yield of quite  $5\frac{1}{2}$  cwts. short of the decennial average, and nearly 8 cwts. below the crop of 1900.

The total crop of hay of all kinds was thus smaller in 1901 than in any year on record, except 1893, although the estimate for 1896 was very nearly as small. Scotland again fared better than England, having a clover hay crop of  $\frac{1}{4}$ -cwt. above the average, and even in the case of meadow hay only falling a third of a cwt. below the ten years' mean. A few English counties, notably Bucks, Hereford, Monmouth, Sussex, Warwick, and

Hay.

Worcester, seem to have escaped the general deficiency in the case of clover hay, but in the case of hay from permanent grass not a single English county even approached an average yield, and in some instances, such as Derby and Cumberland, the estimated deficiency amounted to 10 or 12 cwts. per acre. Fortunately the small hay crop of the year was generally reported as well saved and excellent in quality.

Produce of  
the United  
Kingdom.

The usual statement is appended in which, by the addition of the figures for Ireland to those previously referred to, the total production for the United Kingdom of the chief crops is shewn, the cereals being placed in the order of their relative bulk in 1901.

Crops.	1899.	1900.	1901.

### LIVE STOCK.

The returns of the number of live stock on the agricultural holdings of Great Britain on June 4, 1901, were disappointing as shewing a general diminution, and indicating therefore, to that extent, a decrease of farmers' capital.

Horses.

The only exception to the general tendency was found in the case of horses, which shewed a slight increase of less than one per cent., the increase occurring in the category of "horses used solely for agriculture and mares kept for breeding." In view of the fact that the steady decline of arable cultivation can scarcely fail to reduce the requirements for horse labour on the land, it may reasonably be assumed that the maintenance of the numbers under this head indicates that mares are retained by farmers

for breeding, which would be disposed of if the necessities of farm Horses. work were the only consideration in view. In fact, it seems reasonable to infer that it is the increased attention given to horse-breeding which has served to prevent the reduction in the number of horses naturally to be expected from the economic changes in the general position of agriculture. Except on this hypothesis, it would be difficult to explain why the number of agricultural horses in the country has not only not decreased, but has appreciably increased during the past fifteen or twenty years. The demands of the Army Remount Department are alluded to by several collectors as having affected the returns of the past year, being in some cases mentioned as explaining an increase by the stimulation of breeding, and in other cases as accounting for a decrease by the sales which were effected by farmers. If the returns of Unbroken horses under one year be taken as some index of progress of horse-breeding among farmers, it will be observed that the numbers under that heading shewed a slight gain on the year.

A reduction by 41,000 of the total number of cattle in Great Britain is not, on the total herd of nearly 7,000,000, of much statistical importance, but it gives the first check to the progress year by year recorded since 1894. It unfortunately, however, includes a further decline in the number of cows and heifers, beyond that which was made the subject of special comment in last year's Report. The decrease shewn under the heading of cattle under one year may perhaps be considered consequential, and, as the losses and gains among other cattle balance one another, the actual reduction of the horned stock of the country is represented by the smaller total of milch cows, heifers and calves enumerated in June last, in nearly every part of the country, Wales being relatively the greatest sufferer and the most noticeable exceptions to the rule occurring in the West Riding of Yorkshire, Devon, Lancashire, and Forfarshire.

As in the case of cattle so also in that of sheep, it is a matter Sheep. for regret that a distinct reduction of numbers occurred among the breeding stock. The number of ewes kept for breeding was less in 1901 than in 1900 by 188,000, or 1·8 per cent. If this be added to the previous year's loss of 111,000 the total diminution of the ewe flock in the course of two seasons reaches 300,000.

Sheep.

On the other hand, the lambing season of 1901 appears to have been on the whole successful, and as large a number of sheep under one year was returned from the reduced number of ewes as that recorded a year previously. In Scotland this was especially noticeable as, notwithstanding a loss of 26,000 ewes, the number of sheep under one year showed an increase of no less than 73,000. Among sheep over one year, other than breeding ewes, there was a small net loss of 23,000 in Great Britain, but this figure is the balance of remarkably diverse local changes. Thus in the East Riding of Yorkshire there was an increase of 43,000, in Cumberland of 18,000, in Norfolk of 17,000, and in the West Riding of 16,000. On the other hand 32 English counties shewed a decline, amounting in Kent to 16,000, in Northampton to 14,000, and in Devon to 11,000. In Wales the reduction was greater and more universal than in England, but in Scotland the majority of counties shewed increases amounting in Berwick to 12,000, in Dumfries to 10,000, and in Fife and Roxburgh to 6,000. The chief exceptions to this rule occurred in the Western and North Western Highlands, reductions of 8,000, 6,000, and 4,000 respectively being reported from the counties of Inverness, Argyll and Sutherland. Among the causes to which the decline in sheep is attributed, scarcity of keep in the autumn of 1900 is mentioned by some collectors, and reference is also made by others to the depressing effect on the sheep breeding industry of the low price of wool.

Pigs.

Pigs shewed a decrease of 202,000, or 8½ per cent. in Great Britain, the total number standing at a lower level than in any year since 1893. The effect of the restrictions necessitated by the existence of Swine Fever is referred to in some instances as one of the causes of this reduction. In Cheshire an explanation is offered by one of the collectors which may possibly have wider application. He remarks that "farmers are giving up cheese and butter-making and sending their milk to Manchester and Liverpool or to dairy factories. The whey produced in cheese-making was an important part of the pig-feed."

#### PRICES OF AGRICULTURAL PRODUCE

The usual records of the prices of British Wheat, Barley, and Oats compiled from the returns furnished by the 190 grain markets of England and Wales, scheduled under the Corn

Returns Act, 1882, will be found in the tables now submitted, and the average prices in 1901 are compared with the data secured by this long continued series of official statistics for earlier years back to 1771.

The weekly price of wheat remained unusually steady throughout the past year. The range of variation was indeed only 2s. per quarter, a smaller figure than in any previous year on record, while the general average for the year, 26s. 9d. per quarter, was within 2d. per quarter of the price recorded for 1900. The prices both of Barley and of Oats, on the other hand, shewed a slight rise on the average of the preceding year. In the computation of the septennial average, ascertained for the purpose of tithe in England and Wales, the substitution of the prices of 1901 for those of 1894, resulted, for the first time since 1877, in a slight increase in the yearly value of tithe rent-charge.

Corn Prices  
in 1901.

It may be well to recall the fact that the year 1894 was that in which the price of Wheat reached the lowest level shewn in the records of the Corn Returns—an average of 17s. 6d. per imperial quarter occurring in one week of that year, and the average for the twelve months reaching only 22s. 10d. The recovery of grain prices from that minimum has been slow, for although the average price of Wheat, at 23s. 1d. per quarter, was fractionally higher in 1895, the prices both of Barley and of Oats then shewed a material decline, the average of 21s. 11d. in the one case, and of 14s. 6d. in the other, being lower than in any year since 1781. The averages, therefore, of 27s. 7d. for Wheat, 26s. 8d. for Barley, and 19s. 10d. for Oats, which were recorded in the last week of 1901, were thus in each case material recoveries from the exceptionally low values current six or seven years before.

Course of  
Grain Prices.

Taking a wider survey, the following table conveniently shows that the downward course of corn prices, reckoned over recent quinquennial periods, received some check during the five-year period last ended, although the figures shew how far these better values of British grain still are from a return to the position of earlier though comparatively recent years of industrial activity, when the range of corn prices in this country contrasted strikingly with those prevailing in the less prosperous periods which accompanied the lowest years of agricultural depression,

Course of  
Grain Prices.

Periods.	Wheat. <i>per Qr.</i>	Barley. <i>per Qr.</i>	Oats. <i>per Qr.</i>
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1872-76 . . . . .	52 7	39 3	26 6
1877-81 . . . . .	47 4	35 9	23 4
1882-86 . . . . .	37 3	30 1	20 7
1887-91 . . . . .	32 7	27 2	17 10
1892-96 . . . . .	25 9	24 3	17 0
1897-01 . . . . .	28 8	25 3	17 8

In connection with these data it is not without interest to observe signs that a return to more normal values have appeared of late elsewhere than in England, and, so far as the prices of wheat are concerned, the following statement conveniently brings together the general course of values in two of our immediate Continental neighbours over a similar period to that shewn above. The similarity of the Belgian quotations to those prevailing here is to be noted, while, in regarding the extent to which the French prices in later years exceed the English, it is necessary not to overlook the influence of fiscal changes.

Period.	England. <i>per Qr.</i>	France. <i>per Qr.</i>	Belgium. <i>per Qr.</i>

1897-01 . . . . .	28 8	38 4	30 5

Prices of  
Live Stock

The available official records of the prices of live stock and of meat unfortunately fall considerably short of the statistics which the Corn Returns Act provides in the case of grain. In one instance, indeed, statutory provision has been made under the Markets and Fairs (Weighing of Cattle) Act, 1891, for the weekly supply of particulars, shewing in terms of the ascertained live weight of animals the quotations of value current at certain markets in Great Britain. Although so far as regards the prices

of sheep and of pigs these returns remain too defective to be made the basis of statistical comparison, the live weight prices of cattle permit a compilation of a series of average prices to be summarised in Table XXXV. Selecting certain of the markets for which the most complete returns of this nature are forthcoming, the following comparison may be made, at all events as regards prime or first quality fat cattle. The annual average price thus obtained per cwt. of live weight, in each of the last five years stands as under:—

Price\* of  
Live Stock.

Years.	London.	Liverpool.	Newcastle.	Carlisle.	Aberdeen.	Dundee.	Glasgow.	Edinburgh.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
1897	38 30	32 8	36 2	—	35 0	35 2	35 10	35 8
1898	36 6	31 10	33 4	32 10	34 8	33 8	33 10	34 0
1899	38 0	33 6	36 2	34 6	36 10	35 2	35 4	36 6
1900	39 4	35 4	38 8	35 2	38 2	37 10	36 10	38 4
1901	38 4	34 2	39 10	34 8	36 4	37 0	36 0	37 10

It is thus clear that at the markets included in this table, which may, no doubt, be accepted as fairly typical of the greater part of the country, the price of beef in 1901 was substantially lower than in 1900, the fall being, as a rule, apparently greater in England than in Scotland. The level of values, generally, however, was maintained above that of 1899, and still more above that of 1898.

A further attempt to use the only information with regard to agricultural prices, other than corn, which embodies a direct record of individual transactions, as a measure of the changes of value occurring within the year, may be made by compiling an average, month by month, from thirteen markets rendering sufficient information. This gives, for the past three years, the following comparison of the live weight prices per cwt. of prime cattle in Great Britain:—

Months.	1901.	1900.	1899.	Months.	1901.	1900.	1899.
	s. d.	s. d.	s. d.		s. d.	s. d.	s. d.
January - -	39 2	37 2	34 6	July - - -	39 4	38 8	37 0
February - -	35 10	39 8	34 8	August - -	34 0	37 8	35 6
March - - -	39 0	39 0	34 10	September -	35 6	35 10	34 2
April - - -	36 0	35 10	35 2	October - -	35 2	36 2	34 2
May - - - -	36 0	37 4	35 6	November -	35 4	36 0	35 2
June - - - -	39 4	39 2	37 0	December -	34 6	34 8	37 2

These monthly prices suffice to shew that a smaller range in the market values of cattle occurred in 1901 than in either of the two preceding years. In last year, as also in 1899, the December quotations were the highest, while in 1900 the summer values, and especially the quotation for June, stood at the highest level. In connection with these figures it may not be without interest to draw attention to a new series of statistics, given for the first time this year in Tables XLIV. to XLVII. in which the data furnished by the Returns received under the Markets and Fairs (Weighing of Cattle) Act, 1891, are employed to shew the number of cattle, sheep and pigs respectively which are returned as entering each of the markets scheduled under the Act. From these statistics may be obtained some approximate index of the fluctuation in the relative supplies of home fed stock coming into the markets of Great Britain in different years, as well as the normal distribution of the native supplies of cattle coming forward for sale at different seasons of the year. If these data from twenty-one typical markets may be taken as reflecting roughly the general course of trade, it would seem that distinctly the largest proportion or about 30½ per cent. of the whole number of cattle sent to market are offered in the last three months of the year, 25½ per cent. in the second quarter, 23 per cent in the first quarter, while the third quarter, comprising the months of July, August and September, exhibits the smallest number of horned stock on the markets of the country generally.

When a departure is made from the basis of actual transactions recorded in respect of sales of animals in the open market or by auction, such as are supplied in the data just referred to, it is only in the shape of statements representing local opinion as to the general range of market quotations, that some indirect knowledge of the current movement of values can be got. Comparing the estimates of this nature, which are forthcoming in such tables as are now appended for the year 1901, with those reported to be prevailing in earlier periods, it may be useful to shew that, as regards the prices of cattle indicated by the course of business in the Metropolitan Cattle Market, the level of London prices has been also lower than in 1900. Stated as a range of from 2s. 4d. to 4s. 7d. per 8lbs., it has been in 1901 materially below the range of from 3s. 1d. to 4s. 10d. per 8lbs.

given in the preceding year—figures which are further corroborated by the market records of the Central Meat Market, given in Tables XXXVI. and XXXVII. The London prices of British sheep follow a similar course—the average quotation of 3s. 3d. to 5s. 8d. per 8lbs. in 1901 contrasting with 3s. 4d. and 6s. in 1900—the Central Meat Market values being, in like manner, under those of the preceding year for mutton, and practically identical with the low level of 1899.

Prices of  
Live Stock

Comparing in yet another manner the course of prices not only in London but in two continental cities from which price returns are quoted in the Board's quarterly Journal, the fluctuation in the value of beef per hundredweight would appear to be as under:—

YEAR.	LONDON.		PARIS.	BERLIN.
	First Quality.	Second Quality.	Medium Quality.	First Quality.
	<i>Per Cwt.</i>	<i>Per Cwt.</i>	<i>Per Cwt.</i>	<i>Per Cwt.</i>
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1897	63 0	54 10	54 5	61 9
1898	59 6	51 4	50 5	63 0
1899	64 2	54 10	50 1	64 3
1900	67 8	53 4	46 9	65 8
1901	64 2	54 10	45 11	63 0

In default of more direct information from the centres of inland trade respecting the average market prices of meat and other produce, it has been usual to employ, as a supplementary source of information, giving some measure of the current changes, the recorded declarations of the value of the imported commodities which now form a large element in the total supply available for consumption. A comparison of the average values thus entered by the Customs authorities is given for a long series of years in Table XXXVIII, and it may be noted that, for the last three years, the more important classes of seaborne meat have fluctuated as under, the decline in the latest year being only one penny per ewt. in the case of imported beef, while the values of imported mutton and pig-meat have risen somewhat markedly in the past two years over the low level of 1899.

Other Prices.

## Other Prices.

YEAR.	FRESH BEEF. <i>per cwt.</i>	FRESH MUTTON. <i>per cwt.</i>	FRESH PORK. <i>per cwt.</i>	BACON. <i>per cwt.</i>	HAMS. <i>per cwt.</i>
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1899	38 8	31 7	41 11	35 10	41 5
1900	39 7	34 5	43 0	41 9	49 10
1901	39 6	36 7	43 4	47 1	48 8

So far as these figures may be taken to represent the course of meat prices, they must be held also to indicate a slight check to the extremely low values current since 1894 for these forms of imported food.

In another section of imported food products, where, in default of market records, the Customs valuation may be appealed to as giving the general course of prices, a somewhat similar tendency is apparent, and is more especially notable in lard, and in butter, while in the latter commodity it is not without interest to observe that the average value of the imports has steadily mounted up of late and the value per cwt. in 1901 is within a few pence of that of 1894.

YEAR.	LARD. <i>per cwt.</i>	BUTTER. <i>per cwt.</i>	MARGARINE. <i>per cwt.</i>	CHEESE. <i>per cwt.</i>	EGGS. <i>per 100.</i>
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
1899	28 1	101 7	53 6	46 2	6 2
1900	28 11	108 4	53 7	50 7	6 5
1901	41 1	104 2	53 2	48 2	6 5

## Wool.

The price level of 1901 is much less encouraging in a branch of agricultural production which has recently experienced a serious decline. The data collected from various unofficial sources, and summarised in Table XXXIX., shew that the average prices of different classes of Wool, were as a rule lower in 1901 than in any year previously recorded. The depression appears to have affected the value of both English and Colonial wool, the only class which shews any indication of recovery being half-bred wool, the quotations under this head exhibiting a curiously wide range, and although falling in the lowest grades by 1½d. per lb. from the figures of the previous year, appearing to have improved in the top price to the extent of ½d. per lb.

## AGRICULTURAL IMPORTS.

In the present volume it will be found that practically complete information respecting the imports of all agricultural commodities is supplied, and their sources shewn in detail for the year 1901. In previous years it has been impossible in many cases to exhibit full particulars, especially as regards the countries from whence the imports came, down to a later date than the year before that to which the other information in the volume mainly relates, and I have to acknowledge the courtesy of the Statistical Department of H.M. Customs, in placing fuller details at an earlier date at the disposal of this Board, which must enhance the value of the statistical matter concentrated for convenient reference in these tables. It has been necessary, for the sake of preserving the continuity of the series to present, in certain instances, similar tables for each of the years, 1900 and 1901, but this course will not require again to be resorted to if, with continuation of the co-operation above referred to, complete particulars are as promptly secured.

The number of Cattle imported alive in 1901 was 495,634, or almost exactly the same as in the preceding year, the arrivals of 1900 having been 495,645. These totals, it may be observed, shew only a very insignificant decline from the aggregate of 503,504 head of cattle imported in 1899, when the ports were continuously open to South American live stock. With the exception of the usual small number of Channel Islands cattle, the supplies came only from the United States and Canada, sources which proved adequate to furnish an equivalent for the Argentine quota contributed during the months of 1900 in which that trade continued. The total number of Sheep imported was 384,000 in 1901 as compared with 314,000 in 1900, any deficiency from other quarters being far more than made good by the largely increased arrivals from the United States and Canada. In this connection it is not without interest to observe in the serial statement furnished in Table XLIX. that the imports of live cattle into the United Kingdom were nearly as great in 1883 as at the present time while those of sheep have fluctuated considerably from a maximum of 1,124,000 head in 1882 to a minimum of 63,000 head as lately as 1893.

Live  
Animals.

**Dead Meat.** The relative unimportance of the live stock import trade is however again suggested by comparing it with the rapidly growing trade in dead meat imports, which year by year of late have risen by more or less material annual increments. In this case the aggregate increase of 1901 over 1900 is greater than was then recorded over the twelve months immediately preceding. The remarkable expansion of this trade since so recent a date as 1893 must be recognised when it is observed that the quantity of beef, mutton, and pigmeat of all kinds imported, has very nearly doubled in this interval, rising from a total of 465,000 tons to 919,000 tons—a rate of development much outstripping that of population, as may be shewn by the growth of these imports per head of the people of the United Kingdom from 27lbs. in 1893, to 49½lbs. in 1901.

It is, however, a matter of much interest to trace the sources of this large and growing section of the animal food of the country in recent years, and these may be concisely shewn in the following summary tables, which shew for the past twenty years the annual average contributions furnished respectively by the British Dominions beyond the seas and by Foreign countries. The latter supplies—wherein the contribution of the United States of America has always been the dominant factor—furnish much the largest quota of the sea-borne meat consumed—or 756,000 tons in 1901, as compared with 163,000 tons from Colonial sources. The details, as under, compare the quantity received last year with the average received annually in each of the four preceding quinquennial periods from the countries named:—

PERIOD.	UNITED STATES OF AMERICA.	ARGENTINA.	DENMARK.	HOLLAND.	TOTAL FROM THESE COUNTRIES.
	Tons.	Tons.	Tons.	Tons.	Tons.
1891-95.	332,000	5,000	4,000	7,000	348,000
1896-00.	354,000	17,000	23,000	12,000	396,000
1891-05.	308,000	32,000	42,000	21,000	403,000
1896-00.	435,000	61,000	63,000	41,000	600,000
1901.	524,000	106,000	63,000	60,000	753,000

For similarly contrasted periods, the dead meat annually landed in this country from the Canadian Dominion, from the

Commonwealth of Australia, and from New Zealand, which are Dead Meat. the three Colonial sources of supply, gives the following comparison :—

PERIOD.	CANADA.	AUSTRALIA.	NEW ZEALAND.	TOTAL.
	Tons.	Tons.	Tons.	Tons.
1881-85.	11,000	17,000		28,000
1886-90.	18,000	7,000	50,000	55,000
1891-95.	10,000	37,000	51,000	104,000
1896-00.	34,000	70,000	75,000	179,000
1901.	30,000	40,000	87,000	163,000

Analysing more closely the elements of which the meat imports are composed, it may be observed that fresh beef increased by 19,000 tons to a total of 225,000 tons, which may be regarded as the equivalent of a herd of over 700,000 fat cattle. Fresh mutton rose once again, to a total of over 180,000 tons, the aggregate weight imported representing some 7,000,000 carcasses of sheep and lambs. Both of these descriptions of imported meat have in fact doubled in bulk within the past seven years.

The importation of Butter, which appeared to receive a slight Dairy  
Produce. check in 1900, more than recovered its former position in 1901, the total quantity received being 185,000 tons or an increase of nearly 10 per cent. To Denmark alone was attributed a total of nearly 80,000 tons, the advance in this case on the year accounting for a considerable portion of the increased quantity received. Treating the exports of the several Australasian colonies as a unit, their contribution comes next in bulk to that of Denmark with an aggregate of 20,775 tons, while the Russian butter exports to this country have exhibited the most remarkable extension in the year, the receipts rising from 10,500 to 18,900 tons, or very little below the Australasian quota. Canada and the United States practically recovered the ground which they lost as butter exporters in the preceding year. The imports of Cheese fell below the large total of 1900, a reduction being shewn from all the principal sources except Canada, whose supremacy in this trade has become still more marked, the Canadian supplies last year accounting for three-fifths of the total quantity received at our ports.

Grain.

The total quantity of Wheat and Flour, expressed in its equivalent of grain, imported last year slightly exceeded 5,000,000 tons, or more than in any previous year since 1893. Of this quantity nearly one-fifth, or 975,000 tons, was furnished by British Possessions, but the proportions due to each source of supply fluctuate considerably, as may be shewn in a detailed comparison with the supplies of the six preceding years from the undermentioned countries:—

YEAR.	INDIA.	CANADA.	AUSTRALIA.	NEW ZEALAND.	TOTAL BRITISH.
	Tons.	Tons.	Tons.	Tons.	Tons.
1895	440,000	255,000	170,000	—	874,000
1896	100,000	215,000	—	—	421,000
1897	29,000	247,000	—	—	276,000
1898	477,000	387,000	11,000	—	875,000
1899	410,000	430,000	151,000	35,000	1,026,000
1900	—	400,000	146,000	57,000	603,000
1901	167,000	429,000	210,000	69,000	875,000

The principal sources of the much larger section of our sea-borne supplies of wheat and flour, which have been derived from foreign countries, may be similarly analysed as regards their origin in the following summary:—

YEAR.	UNITED STATES.	ARGENTINA.	RUSSIA.	AUSTRIA-HUNGARY.	OTHER FOREIGN COUNTRIES.	TOTAL FOREIGN.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1895	2,220,000	571,000	1,153,000	91,000	497,000	4,482,000
1896	2,632,000	250,000	863,000	90,000	713,000	4,548,000
1897	2,797,000	47,000	756,000	79,000	402,000	4,081,000
1898	2,104,000	201,000	320,000	51,000	170,000	2,846,000
1899	3,061,000	576,000	325,000	72,000	165,000	3,999,000
1900	2,871,000	233,000	225,000	81,000	212,000	4,327,000
1901	2,343,000	415,000	120,000	56,000	135,000	4,073,000

The large diminution in the supplies shewn to have come from Argentina is the most striking feature of the past year, but the reduction in this respect has been more than made good by the increase attributable to the United States. It may be added that the importation of flour, which fell off somewhat in 1900 from the level of the preceding year, nearly reached again in 1901 the total recorded in 1899.

The imports of Barley amounted to 22,000,000 cwts. or about 5,000,000 cwts. above those of either of the two years immediately preceding, though less by nearly 2,600,000 cwts. than the total for 1898. Oats also were received from abroad in considerably larger quantities than in 1900, and in both these cereals the augmented supplies came mainly from Russia, although in the case of barley, Roumania was responsible for a considerable increase. The net addition of some 7,200,000 cwts. to the imports of barley and oats, it may be observed, very much more than counterbalanced the diminution, which ultimately proved less than half this figure, in the arrivals of maize, the gap left by the reduction of the United States' supply of that cereal being filled by Roumania and Argentina.

#### COLONIAL AND FOREIGN STATISTICS.

The Colonial and Foreign Statistics appended to the present volume have been again extended in their scope by the addition of details for the Colony of Natal, for the several States of what is now the Australian Commonwealth, and for the Provinces of the Canadian Dominion which supply official returns. The recently established annual statistics of Belgium have allowed the supply of fuller particulars respecting the distribution of the crops in a country in which the position of the agricultural industry more closely resembles that of England than any other in Europe in relation to the density of population. At the eastern extremity of the Continent, the details now furnished for Northern Caucasia bring also a new section of Russian territory under review, while the recently compiled results of the Census of Live Stock taken in 1900, for the Russian Empire as a whole, have supplemented in an important particular the official information we possess as to the agricultural conditions of the largest, but perhaps least densely peopled, of Continental States.

Later returns of the numbers of live stock have also this year become available, as the results of special enumerations where annual records are not forthcoming on this head from countries such as Austria, Germany, Belgium, Switzerland, Servia, and Roumania. In all the instances in which a more recent survey can thus be made of the animal wealth of our Continental neighbours, increases, more or less material, in the number of their cattle are accounted for.

Live Stock  
in Foreign  
Countries.

Much the largest addition to the recorded herds of Europe appears in the Russian Empire. Omitting Poland, where a slight decrease appears, the fifty European Governments of Russia proper returned in 1900 close upon 33,000,000 head of cattle as against 24,600,000 at the last enumeration in 1888. Germany, where 19,000,000 cattle are now accounted for, possesses the next largest of European herds, and continues to exhibit a continued development in her stock of cattle, which are now more numerous than in 1883, by 20 per cent.

Very noticeable also is the increase in the number of pigs shewn in nearly all the European States in recent years, and this is more especially visible in Germany, where not far short of 17,000,000 head are now returned.

On the other hand, the continued decline in the numbers of sheep, to which attention has been frequently drawn in earlier reports, is once again emphasised by the latest Continental returns. Except in Russia proper where, owing to the unfortunate circumstance that goats are now included with the ordinary flocks—a practice not adopted in the earlier figures—there is a slight uncertainty as to the comparability of the latest totals, the returns for 1900 exhibit further losses. The last recorded reductions in the flocks alike of France, of Germany, and of Roumania respectively, will be found to exceed 1,000,000 head in each instance, and they amount altogether to a considerable figure elsewhere. In extra-European countries, although a later estimate from Uruguay than has been previously available shews some increase in the flocks of that part of South America, the very serious losses reported in recent years in the sheep of our Australian Colonies are continued in the latest figures, the aggregate decline apparently exceeding 28,000,000 head in the last decade. The flocks of New Zealand have not participated in the Australian reduction, although their growth since 1895 has been relatively inconsiderable to the extension of earlier years.

American  
Statistics.

Although the issue of the present statistics has been somewhat delayed, in the hope that the important results of the Agricultural portion of the Twelfth census of the United States of America might be incorporated in this volume, with full official

confirmation and with such corrections of the earlier records as the new investigations might involve, it has not been found practicable thus to embody the new data in the tables. It has been, therefore, necessary to retain for the present in Table CXXVIII the earlier statistics, as supplied in official form by the Government of the United States, up to the dates there indicated, although the totals of the census figures semi-officially communicated in the case of live stock are given among the international comparisons supplied for the most recent dates in the four closing tables of this volume.

In successive years I have felt it my duty in submitting these international comparisons to recommend the exercise of some degree of caution in accepting data of this nature as strictly parallel in every instance as between one country and another, owing to the diversity of the methods adopted by the various States of the world, the different degrees of accuracy secured in practice in the collection of their agricultural statistics, and the varying length of the periods permitted to elapse between one enumeration and another. This subject has been once more under consideration by the International Statistical Institute, and, as the result of the latest deliberations, in which I have been permitted to take part at the Congress held at Buda-Pest in October last, a detailed explanation of the systems in use by various countries is now being formulated.

As a rule, however, in such tables as are furnished in this volume, whatever degree of uncertainty may attend the international comparability of the absolute figures, it has been generally assumed to be safe to regard as legitimate such comparisons as are suggested between the acreage or live stock of different periods within the limits of a single country, wherein approximate continuity of statistical method may be assumed. It is therefore necessary on this occasion to extend the scope of the caution above referred to and to invite attention to the explanation in the Report of the Chief Statistician for Agriculture to the Director of the latest American Census (Bulletin No. 156, 14th April, 1902), that the total of the animals now shewn as existing in the United States on the 1st June, 1900, includes such young animals as may have been born in the spring of the Census year. This course would not appear to have been followed on earlier

American occasions. The scope of the data collected in 1900 would also appear to have been enlarged. The use of an individual farm schedule to be filled up by the "operators" of farms, plantations and ranges in all parts of the country, was supplemented by a second schedule for the recording by special agents of the statistics of the larger ranches of the Western and South Western States, and by a further enumeration, not previously attempted, of the number of domestic animals not upon farms and ranges, especially in cities, towns and villages. The aggregate results of the Census of 1900, thus obtained, may be summarised as under:—

Live Stock enumerated 1st June, 1900.	On Farms or Ranges.	Not on Farms or Ranges.	Total.
Dairy Cows . . . .	17,140,000	973,000	18,113,000
Other Cows . . . .	11,592,000	76,000	11,668,000
Calves under 1 year old . .	15,333,000	262,000	15,595,000
Other Cattle . . . .	23,757,000	306,000	24,063,000
Total Cattle . . . .	67,822,000	1,617,000	69,439,000
Sheep (including Lambs) . .	61,606,000	231,000	61,837,000
Swine . . . . .	62,876,000	1,818,000	64,694,000
Horses . . . . .	18,230,000	2,337,000	20,567,000

Although no exact comparison of these results with any previously issued figures, is practicable, it may be added that notwithstanding the large apparent excess which these totals exhibit over the official estimates of earlier years, the Census Statistician, in the Bulletin above quoted gives it as his opinion that taking into account the deficiencies of former enumerations, the Cattle and Sheep of the United States were, in fact, somewhat less numerous in 1900 than in 1890. The decrease, he estimates, was "probably not more than seven per cent." in the case of Cattle, and about two per cent. in the case of "Wool-bearing Sheep" on farms and ranges. On the other hand the totals of swine on farms and ranges are, he states, greater by 10 per cent. in the decade, while the horses, exclusive of colts under one year, have increased 11 per cent.

The precise results of the final Census enumeration of Crop areas in the United States have not yet been received, and although the forecasts which are current in the Press, suggest here, also, very large modifications of the older official figures which,

if ultimately confirmed, would add several million acres to the <sup>American</sup> areas both of wheat and of maize, appearing in the annual <sup>Statistics.</sup> figures of the Washington Department, it is necessary to reserve, on this occasion, any comments on the effect which the American Statistics in this respect may have on general estimates of production. Data for the cereal crops of the United States in 1901 are not therefore given with those of the other countries of the world, whose crop areas, annual production, and yield per acre, are again contrasted in the Comparative Tables which close the series of Foreign and Colonial summaries, now appended.

I have the honour to be, Sir,

Your obedient Servant,

P. G. CRAIGIE.

Board of Agriculture

30th April, 1902.

## CONTENTS OF TABLES.

## SECTION I.—RETURNS OF ACREAGE AND LIVE STOCK.

	Tables.	Pages.
<b>ACREAGE of CROPS and NUMBER of LIVE STOCK.</b>	SUMMARY for <b>ENGLAND, WALES, SCOTLAND, GREAT BRITAIN, IRELAND,</b> and the <b>UNITED KINGDOM</b> in the Years 1901 and 1900	I. 2-3.
	DETAILS for COUNTIES:	
	COUNTIES in ENGLAND - - -	II. 4-17.
	COUNTIES in WALES - - -	" 18-21
	COUNTIES in SCOTLAND - - -	" 22-32.
	ISLE OF MAN and CHANNEL ISLANDS -	" 33.
<b>TOTAL AREA, HILL GRAZINGS, WOODS, and PLANTATIONS.</b>	TOTAL AREA of LAND and WATER, and AREA of MOUNTAIN and HEATH LAND <i>used for grazing</i> in the Year 1901; with the ACREAGE of WOODS and PLANTATIONS in the Year 1895; in each County of Great Britain, in the Isle of Man, and in the Channel Islands - - -	III. 34-35
<b>CERTAIN GREEN CROPS, SMALL FRUIT, and ORCHARDS.</b>	ACREAGE under CABBAGE, KOHL-RABI, RAPE, LUCERNE, SMALL FRUIT, and ORCHARDS in each County of Great Britain, in the Isle of Man, and in the Channel Islands in the Year 1901 - -	IV. 36-37
<b>LAND occupied by TENANTS and by OWNERS.</b>	EXTENT OF LAND under CROPS and GRASS, occupied by TENANTS and by OWNERS respectively, in each County of Great Britain, in the Isle of Man, and in the Channel Islands, in 1901 and 1900 -	V. 38-39.
<b>ACREAGE and LIVE STOCK in each DIVISION of the UNITED KINGDOM.</b>	ACREAGE under CROPS and GRASS, and NUMBER of LIVE STOCK, in each Year from 1893 to 1901 inclusive; with YEARLY AVERAGES for 1871-75, 1876-80, 1881-85, and 1886-90:—	
	UNITED KINGDOM - - -	VI. 40-41.
	GREAT BRITAIN - - -	VII. 42-43.
	ENGLAND - - -	VIII. 44-45.
	WALES - - -	IX. 46-47.
	SCOTLAND - - -	X. 48-49.

## SECTION II.—RETURNS OF PRODUCE OF CROPS.

PRODUCE  
in  
EACH COUNTY  
of  
GREAT BRITAIN.

TOTAL PRODUCE, ACREAGE, and YIELD PER ACRE  
in EACH COUNTY of GREAT BRITAIN, in the Year  
1901, compared with the Estimated Yield for the  
Years 1900 and 1899, and with the AVERAGE of  
the TEN YEARS 1891-1900 :—

	Tables.	Pages.
WHEAT - - -	XI.	52-53.
BARLEY - - -	XII.	54-55.
OATS - - -	XIII.	56-57.
BEANS - - -	XIV.	58-59.
PEAS - - -	XV.	60-61.
POTATOES - - -	XVI.	62-63.
TURNIPS - - -	XVII.	64-65.
MANGOLD - - -	XVIII.	66-67.
HAY :—		
From Clover, &c. - -	XIX.	68-69.
From Pasture - - -	XX.	70-71.
All Kinds - - -	XXI.	72.
HOPS - - -	XXII.	73.

PRODUCE  
in  
EACH DIVISION  
of the  
UNITED KINGDOM.

TOTAL PRODUCE, ACREAGE, and YIELD PER ACRE, in  
ENGLAND, WALES, SCOTLAND, GREAT BRITAIN,  
IRELAND, and the UNITED KINGDOM, in each  
Year from 1891 to 1901 inclusive :—

	Tables.	Pages.
Wheat, Barley, and Oats	XXIII.	74-75.
Beans, Peas, and Potatoes	"	76-77.
Turnips, Mangold, & Hops	"	78-79.
Hay - - -	"	80-81.

## SECTION III.:—PRICES OF CORN.

	Tables.	Pages.
<b>LONDON GAZETTE NOTICES.</b>	a.—AVERAGE PRICE of an IMPERIAL BUSHEL of British Wheat, Barley, and Oats, for SEVEN YEARS ENDING CHRISTMAS DAY, 1901 - - -	XXIV. 85.
	b.—AVERAGE PRICE of an IMPERIAL BUSHEL of British Corn, for the YEAR ENDING CHRISTMAS, 1901 - - -	" 85.
	c.—AVERAGE PRICE of British Corn per QUARTER (Imperial Measure), for EACH QUARTER of 1901 - - - -	" 85.
<b>WEEKLY PRICES.</b>	AVERAGE PRICES and QUANTITIES of British Corn (Imperial Measure) returned as sold in England and Wales, during EACH WEEK of the Year 1901 -	XXV. 86-87.
<b>PRICES at each MARKET.</b>	AVERAGE PRICES and QUANTITIES of British Corn returned as sold in EACH OF THE RETURNING MARKETS in England and Wales, in the Year 1901 - - -	XXVI. 88-95.
	ANNUAL AVERAGE PRICES of British Corn, and RANGE of the Weekly Averages for England and Wales, in each Year, from 1851 to 1901 inclusive - - -	XXVII. 96.
	AVERAGE PRICES of British Corn in England and Wales, in each Year, from 1771 to 1820 inclusive - - -	XXVIII. 97.
<b>COMPARA- TIVE PRICES.</b>	AVERAGE PRICES and QUANTITIES of British Corn returned as sold in the Towns in England and Wales from which Returns were received, in each Year, from 1821 to 1901 inclusive - - - -	XXIX. 98-99.
	AVERAGE PRICES per Imperial Quarter, and QUANTITIES of British Corn returned as sold in England and Wales, in EACH MONTH of the SEVEN YEARS from 1895 to 1901 inclusive - - - -	XXX. 100-101.

	Tables.	Pages.
<b>TITHE AVERAGES.</b>	ANNUAL and SEPTENNIAL AVERAGE PRICES, per Imperial Bushel, of British Wheat, Barley, and Oats, and the Value of £100 of TITHE RENT-CHARGE in each Year, from 1836 to 1901 inclusive	XXXI. 102-103.
<b>VALUES of IMPORTED CORN.</b>	AVERAGE VALUE per Imperial Quarter of WHEAT, BARLEY, and OATS, IMPORTED into the UNITED KINGDOM, in each of the Years 1900 and 1901	XXXII. 104.

#### SECTION IV.:—PRICES OF AGRICULTURAL PRODUCE (*other than Corn.*)

	Tables.	Pages.
<b>LIVE STOCK.</b>	AVERAGE VALUE, per Head, of HORSES, CATTLE, SHEEP, and PIGS, Imported into the United Kingdom, in each Year, from 1881 to 1901 inclusive	XXXIII. 106.
	AVERAGE PRICES of BRITISH CATTLE and SHEEP, <i>per 8 lbs.</i> , sinking the O&S, at the METROPOLITAN CATTLE MARKET, in each Year, from 1881 to 1901 inclusive	XXXIV. 107.
	AVERAGE PRICES of FAT CATTLE, <i>per Cwt.</i> (LIVE WEIGHT), at certain PLACES in ENGLAND and SCOTLAND, in each Year from 1895 to 1901 inclusive	XXXV. 108.
<b>MEAT and PROVISIONS.</b>	AVERAGE PRICES of various kinds of DEAD MEAT, <i>per 8 lbs.</i> , at the LONDON CENTRAL MEAT MARKET, in each of the Years 1899, 1900, and 1901	XXXVI. 109.
	AVERAGE WHOLESALE PRICES of BEEF and MUTTON, <i>per lb.</i> , in LONDON, LIVERPOOL, and GLASGOW, in each Year, from 1881 to 1901 inclusive	XXXVII. 110-111.
	AVERAGE VALUES of various kinds of DEAD MEAT and PROVISIONS Imported into the United Kingdom, in each Year, from 1881 to 1901 inclusive	XXXVIII. 112-113.
<b>WOOL.</b>	AVERAGE PRICES of WOOL, in each Year, from 1881 to 1901 inclusive	XXXIX. 114.

## SECTION V.:—WEATHER OF 1901.

	Tables.	Pages.
RAINFALL, TEMPERATURE, and BRIGHT SUNSHINE in 1901 in the UNITED KINGDOM . . . . .	XL.	116.
MONTHLY RAINFALL, ACCUMULATED HEAT, and BRIGHT SUNSHINE in 1901 :—		
England and Wales . . . . .	XLI.	117.
Scotland . . . . .	,,	117.

## SECTION VI.:—TRADE IN LIVE STOCK WITH IRELAND.

		Tables.	Pages.
IMPORTS.	{	NUMBER of HORSES, CATTLE, SHEEP, and PIGS, IMPORTED into GREAT BRITAIN from IRELAND, in each Year, from 1881 to 1901 inclusive . . .	XLII. 120-121.
		NUMBER of HORSES, CATTLE, SHEEP, and PIGS, EXPORTED from GREAT BRITAIN to IRELAND, in each Year, from 1881 to 1901 inclusive . . .	XLIII. 122-123.

## SECTION VII.:—SUPPLY AT MARKETS.

		Tables.	Pages.
<b>CATTLE, SHEEP, and PIGS.</b>	{	NUMBER of ANIMALS returned as entering the Places scheduled under the Markets and Fairs (Weighing of Cattle) Act, 1891, in the Years 1897 to 1901 :—	
		Cattle - - - -	XLIV. 127.
		Sheep - - - -	XLV. 128.
		Pigs - - - -	XLVI. 129.
<b>CATTLE.</b>	{	AVERAGE NUMBER of CATTLE returned as entering the Places scheduled under the Markets and Fairs (Weighing of Cattle) Act, 1891, in each quarter and average annual number, 1894 to 1901	XLVII. 130.

# SECTION VIII.—IMPORTS OF AGRICULTURAL PRODUCE.

(a) The particulars for Ireland have been furnished by the Department of Agriculture and Technical Instruction for Ireland.

(b) The acreage shown for the United Kingdom differs from Table I. and some other Tables because of the omission of the Channel Islands and the Isle of Man, where no Produce Statistics are collected.

(c) Including Sweden.

(d) In Ireland Beet-Root is included with Mangold.

ESTIMATED YIELD PER ACRE of each of the PRINCIPAL CROPS, in ENGLAND, in UNITED KINGDOM, in each Year from 1891 to 1901 inclusive.

(c) This acreage does not quite agree with that given in some other Tables, owing to 14 acres of Turnips having been originally returned as under Mangold.

(f) These acreages are corrected by deducting a small number of acres originally returned in excess.

(g) Revised estimate.

(a) The particulars for Ireland have been furnished by the Department of Agriculture and Technical Instruction for Ireland.

(b) The Acreage shown for the United Kingdom differs from Table I. and some other Tables because of the omission of the Channel Islands and the Isle of Man, where no Produce Statistics are collected.

ESTIMATED YIELD PER ACRE of each of the PRINCIPAL CROPS, in ENGLAND, in UNITED KINGDOM, in each Year from 1891 to 1901 inclusive.

INDIAN  
AND  
COLONIAL  
AGRICULTURAL  
STATISTICS.

TABLE XCII.—ACREAGE under CROPS in BRITISH INDIA, in each of the Years 1897-98, 1898-99, and 1899-1900.

(From the "Agricultural Statistics of British India.")

DESCRIPTIONS.	1897-98.	1898-99.	1899-1900.
	<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>
AREA according to PROFESSIONAL SURVEY . . . . .	732,792,073	732,523,346	732,585,933
AREA of FEUDATORY and TRIBUTARY STATES . . . . .	130,552,091	127,633,331	127,636,301
AREA for which no Return Exists . . . . .	63,837,895	63,215,833	63,400,823
NET AREA by Professional Survey . . . . .	542,492,967	544,942,122	544,553,079
FORESTS . . . . .	64,546,539	64,753,597	65,543,954
NOT AVAILABLE FOR CULTIVATION . . . . .	133,118,424	126,556,917	125,500,564
CULTURABLE WASTE other than Fallow . . . . .	104,550,103	106,292,719	106,404,704
CURRENT FALLOW . . . . .	37,150,326	41,260,594	57,163,761
DETAILS NOT AVAILABLE . . . . .	499,149	..	..
NET AREA CROPPED during the Year . . . . .	193,008,092	196,497,626	195,151,993
AREA CROPPED MORE THAN ONCE . . . . .	27,245,474	27,100,675	23,744,408
TOTAL AREA CROPPED (including land cropped more than once)	220,253,566	223,658,301	223,896,401
CORN CROPS:—			
WHEAT . . . . .	(a) 19,946,164	(a) 20,235,311	(a) 16,304,779
BARLEY . . . . .	8,000,393	7,072,947	6,421,961
MAIZE . . . . .	6,414,948	6,144,540	5,195,472
MILLET { Cholera or Jawar ( <i>Sorghum vulgare</i> ) . . . . .	23,802,650	21,765,399	21,604,523
{ Cumbu or Bajra ( <i>Pennisetum typhodesum</i> ) . . . . .	12,808,761	12,585,761	8,317,180
{ Ragl or Marua ( <i>Eleusine Coracana</i> ) . . . . .	2,773,807	3,677,474	5,321,590
GRAIN (Palae) ( <i>Cleria arvensis</i> ) . . . . .	16,103,558	9,592,819	7,573,660
OTHER CORN or PULSE CROPS . . . . .	26,873,442	27,102,291	23,361,154
TOTAL ACREAGE of CORN CROPS . . . . .	111,933,728	107,286,461	92,009,843
SUGAR { Sugar Cane . . . . .	2,648,698	2,755,887	2,693,029
{ Other Kinds . . . . .	125,875	131,907	121,638
FIBRES { Cotton . . . . .	8,926,229	9,178,090	8,275,841
{ Jute . . . . .	2,159,908	1,690,737	2,070,668
{ Other Kinds . . . . .	285,421	637,703	494,476
RICE . . . . .	70,781,498	74,784,045	73,508,952
TOMACCO . . . . .	1,648,433	1,092,903	915,321
OILSEEDS { Linseed . . . . .	2,340,030	2,493,736	1,680,447
{ Til or Jajati ( <i>Sesamum Indicum</i> ) . . . . .	3,266,658	3,107,745	3,440,130
{ Rape and Mustard . . . . .			2,348,912
{ Other Kinds . . . . .	4,911,947	6,565,630	3,915,962
OPPIUM . . . . .	596,232	692,975	640,383
INDIGO . . . . .	1,300,513	1,013,677	1,046,634
COFFEE . . . . .	151,892	168,280	182,505
TEA . . . . .	465,693	482,909	490,187
CONDIMENTS and SPICES . . . . .	869,436	985,752	809,949
FOODING CROPS . . . . .	2,585,278	2,908,946	2,946,482
ORCHARDS and GARDEN PRODUCE . . . . .	2,844,105	3,132,982	3,105,029
ALL OTHER . . . . .	2,884,322	4,632,806	4,784,171

(a) As these areas relate to British India only, they are necessarily less than those given in Table XCIII which include also the acreage of Wheat in the Native States.

TABLE XCIII.—ACREAGE and ESTIMATED PRODUCE of WHEAT in INDIA (including the undermentioned NATIVE STATES), in each Year, from 1895-96 to 1900-01 inclusive.

(From the "Final Memoranda on the Wheat Crop," published by the Government of India.)

PROVINCES and NATIVE STATES.	1895-96.	1896-97.	1897-98.	1898-99.	1899-00.	1900-01.

# INDEX

## T A B L E S.

---

### 1.—Acreage, Produce, and Live Stock in the United Kingdom.

*(For the acreage and live stock in British Possessions  
and in Foreign Countries, see Contents of Tables,  
pp. xlv.-xlvii.)*

### 2.—Imports, Exports, Markets, and Prices.

---

*Note.*—These alphabetical Index Tables have been compiled for the purpose of ready reference to the page of the Returns on which information respecting any particular crop or article may be sought. They are not intended to supersede the use of the detailed and classified list of Contents of the Tables (pp. xxxvii.-xlvii) which affords a complete synopsis of the Statistical matter published in the Returns.

# THE JOURNAL OF THE BOARD OF AGRICULTURE.

(Published on the 24th of June, September, December, and  
March. Price 1s.)

To be purchased, either directly or through any Bookseller, from  
*Messrs. Loughton & Co., 1, Essex Street, Strand, W.C.*

This Publication contains information as to the position of Agriculture at home and abroad, Crops in Foreign Countries, and further particulars obtained from Foreign and Colonial Reports, Diplomatic and Consular Despatches, and other sources of intelligence accessible to the Department: notes on Dairying, Fruit Farming, Poultry Rearing, and other rural industries, together with short descriptions of noxious Insects and Fungi, with appropriate remedies. Statements of the Quantities and Values of Agricultural Produce Imported and Exported, and Records of the Current Prices of Grain, Meat, Dairy Products, Fruit, and Vegetables are given in each number.

## ORDNANCE SURVEY MAPS OF GREAT BRITAIN AND IRELAND.

The chief maps published by the Ordnance Survey are on the following scales:—

	<i>Price per Sheet uncoloured,</i>
$\frac{1}{12500}$ or about 10 feet to one mile.	2s. 6d.
$\frac{1}{25000}$ or five feet to one mile. Both for towns only.	
$\frac{1}{10000}$ or 25344 inches to a mile, complete for Great Britain.	3s. with areas.
In progress in Ireland.	2s. 6d. without areas.
$\frac{1}{62500}$ or 6 inches to a mile, complete for Great Britain and Ireland.	2s. 6d. per full sheet.
	1s. per quarter sheet.
$\frac{1}{250000}$ or one inch to a mile.	1s. per sheet for England, Wales, and Ireland.
1. Outline with contours.	1s. 9d. per sheet for Scotland (Double size.)
2. With hills in black.	
3. " " brown (in progress).	
4. In colours, with hills and contours (in progress).	

All the above maps are of various dates, and are periodically revised, except the Town Maps, which are only revised at the expense of the Town.

There are Agents for the sale of Ordnance Survey Maps in most of the chief Towns, and maps can be ordered, and indexes, &c., seen at many Head Post Offices in places where there are no Agents. They can also be ordered, through any bookseller or railway bookstall, from The Director General, Ordnance Survey Offices, Southampton, or—in the case of Ireland—from the Officer in Charge, Ordnance Survey, Dublin.

A leaflet describing the various editions of these maps may be obtained, post free, on application to the Secretary, Board of Agriculture, 4, Whitehall Place, London, S.W.

## GEOLOGICAL SURVEY PUBLICATIONS OF GREAT BRITAIN AND IRELAND.

The Agents for the sale of Ordnance Survey Maps are also, as a rule, agents for the sale of Geological Publications.

## POST OFFICE SAVINGS BANK.

HOW TO SAVE MONEY, HOW TO INSURE, AND HOW TO PROVIDE  
FOR OLD AGE.

More than 11,000 Post Offices are open all day to receive savings, and an account can be started with as little as a shilling. Pennies can be saved by getting a form for the purpose at any Post Office, and buying a penny stamp and putting it on the form; when the form contains twelve stamps it can be taken to a Post Office Savings Bank, and it will be received as a deposit of one shilling.

As much as 50*l.* can be saved every year so long as there is not more than 200*l.* in the account.

Beyond saving 50*l.* a year, Government Stock can be bought to the amount of 200*l.* a year and 500*l.* altogether. A small commission is charged for buying and selling Stock.

Interest is allowed at the rate of  $2\frac{1}{2}$  per cent. a year on each *£* deposited, that is, a halfpenny a month on every *£*.

Money can be withdrawn from an Account at any Post Office Savings Bank without delay, by sending the proper notice to London. The Order for the money will be sent by return of post.

Depositors in the Post Office Savings Bank have perfect security. The Government is bound by law to repay deposits and interest.

ANY PERSON BETWEEN 14 AND 65 YEARS OLD CAN INSURE HIS LIFE for sums from 5*l.* to 100*l.* Children between 8 and 14 years old can be insured for 5*l.* If the payments cannot be kept up after a life has been insured for two years a fair portion of the money paid is returned. For 4*s.* 4*d.* a year (a penny a week), a person aged 24 can insure 10*l.* at his death.

OLD AGE PAY to begin at any age can be bought. When the pension does not begin at once it can be arranged that the money paid for it shall be returned, if the payments cannot be kept up, or if the Depositor should die. A woman aged 24 can buy a pension of 1*l.* a year, to begin at 60, for 4*s.* 4*d.* a year (a penny a week). If at any time before she is 60 she cannot keep up the payments, the money paid will be returned to her, and if she should die it will be paid to her representatives.

A Depositor who insures or buys a pension is put to very little trouble. All his payments are made through his Savings Bank account, and when there is enough money in the account he is not asked for anything when a payment is due.

Further and fuller information about depositing money, buying Government Stock, insuring lives and buying pensions can be had at any Post Office Savings Bank, or by writing direct to the Controller Savings Bank Department, General Post Office, London. There is no charge for giving information, and letters to and from the Controller are sent free through the post.
